

WordBuds - Iteration 1

Caleigh Andrews, Javier Caldwell, Ainsley Lewis, Gavin Ward

Project & Iteration Goal

- Wordbuds is an existing app intended to let parents track their child's speech development
- Currently deployed on Test Flight and Google Play Store, but not updated version
- Our goal is to improve & add functionality

Plan

vs

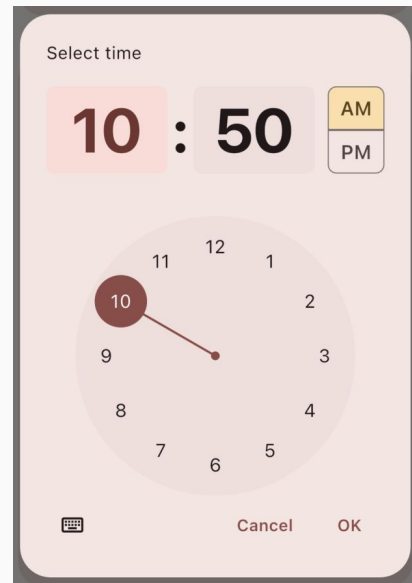

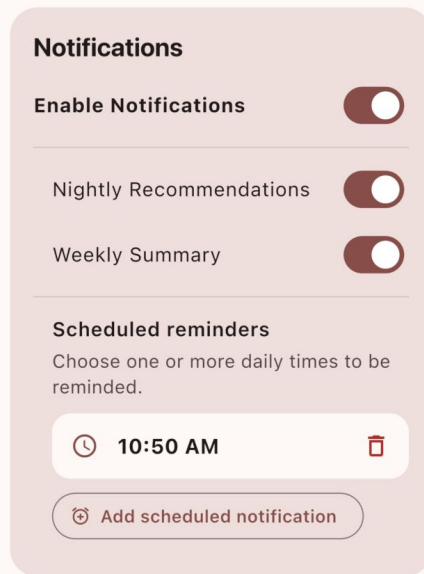

Actual

- Discover what already exists for our assigned features
- Complete CITI training
- Download and use Flutter/ Dart
- Set up Firebase account to run app

- Completed these set up tasks
- Reviewed use of API keys, put damper in actual development as Firebase called them

Major Accomplishments

- Fix dependency issues
- Scheduled Notifications
 - First full feature done
 - Integrates with apple and android notification
 - Allows for exact time notifications
 - Adds new visual components

Engineering and Quality

Investigations

Title		
1	Feature: Informed Consent Window #68	
	✓ SPIKE: investigate how to make permissions #79	
	○ FEATURE: implement permissions window #80	
	○ SPIKE: get the permissions window text from sponsor #81	
2	Feature: Notifications #69	
3	Feature: Family Sharing #72	
	○ Investigate previous documentation relating to family sharing #88	
4	Feature: Home Screen Widgets #74	
	✓ [Investigation]: Widget Dependencies #82	
	○ [Investigation] Widget Development Documentation #83	

Bug Reports

remove API key #94

Draft ainsleylewis005 wants to merge 7 commits into `main` from `93-bug-remove-api-key`

Conversation 2 · Commits 7 · Checks 1 · Files changed 3

ainsleylewis005 commented 4 days ago

deleted the api key from environments.ts. if i need to delete any more information from the file comment on this!

Update environment.ts

ainsleylewis005 requested review from **andrewsc393**, **bookmasterj** and **gavin-b-ward** 4 days ago

ainsleylewis005 self-assigned this 4 days ago

Team Contributions

- Ainsley: Rotated Firebase API Key, Investigation on informed consent implementation
- Caleigh: Looked into documentation on family sharing – found that a feature exists to allow multiple accounts & two factor authentication
- Javier: Investigation into external widget packages and related documentation
- Gavin: Updated dependencies allowing for builds and implemented the scheduled notifications functionality

Completed by entire team

Lessons Learned

Next Steps

- More thorough planning process
- Dependencies need to be evaluated + removed when possible
- Preparedness for bugs/unexpected issues

- Further implementation of:
 - informed consent forms
 - family sharing
 - widget creation
- Dependency Management

AI Usage Statement

- CLI tools for code generation
 - All generated code reviewed by a person before committing/pushing
- Pi Agentic Coding tool for notifications work
- Code Review
 - In addition to review by the team
